

Revision Femoral Head

Retention of well-fixed femoral stem during acetabular revision cases

Isolated acetabular revision with retention of well-fixed femoral stem account for about 27% of all revision THR [1, 2]. If UOC standard **12/14 (5°)** femoral head taper could not compatible with the trunnion of retained prosthesis, Revision Femoral Head offers additional 4 taper options, including **10/12, 11/13, 12/14 (3°)**, and **14/16**, to cover the majority of existing femoral stem. Revision Femoral Head are fully compatible with U-Motion II acetabular system and cemented Full XPE Cup if cup revision is necessary.
